

Why do you need eClick?

To support the Government's net zero target, we anticipate that building regulations will require housing developments to be ready for electric vehicles (EV).

eClick is a low cost, passive EV charging solution, which will put you in the best position to be compliant with current and future requirements.

The eClick docking station will be fully installed with a PEN (protective earth and neutral) monitoring device and securely mounted by your electrical contractor.

E.ON Energy Solutions Limited.
Registered Office: Westwood Way,
Westwood Business Park, Coventry CV4 8LG.

Make your housing development EV-ready with our low-cost solution

What are the benefits?

- ✓ Our prices are extremely competitive at just £150 per plot (supply only) with a rebate for group deals.
- ✓ The product is very quick and simple to install.
- ✓ Because our product is modular, your customers have a choice of EV charger, whereas other providers only offer full solutions from day one.
- ✓ We will provide a simple installation guide to make sure you meet the current IET standards.
- ✓ Our product will put you in the best position to comply fully with planning policies today and building regulations tomorrow.
- ✓ The risk of parts becoming obsolete is significantly reduced as we manufacture the product in-house.
- ✓ The need for DNO upgrades can be eliminated with our free and smart site-wide load balancing.
- ✓ We offer 7.4/11/22kW charge speeds on all products in the range.
- ✓ We offer a standard 3-year warranty with the option to extend.
- ✓ We use an IP55 rated cover that will keep your eClick safe, secure and weather-proof, ready for your home buyers.
